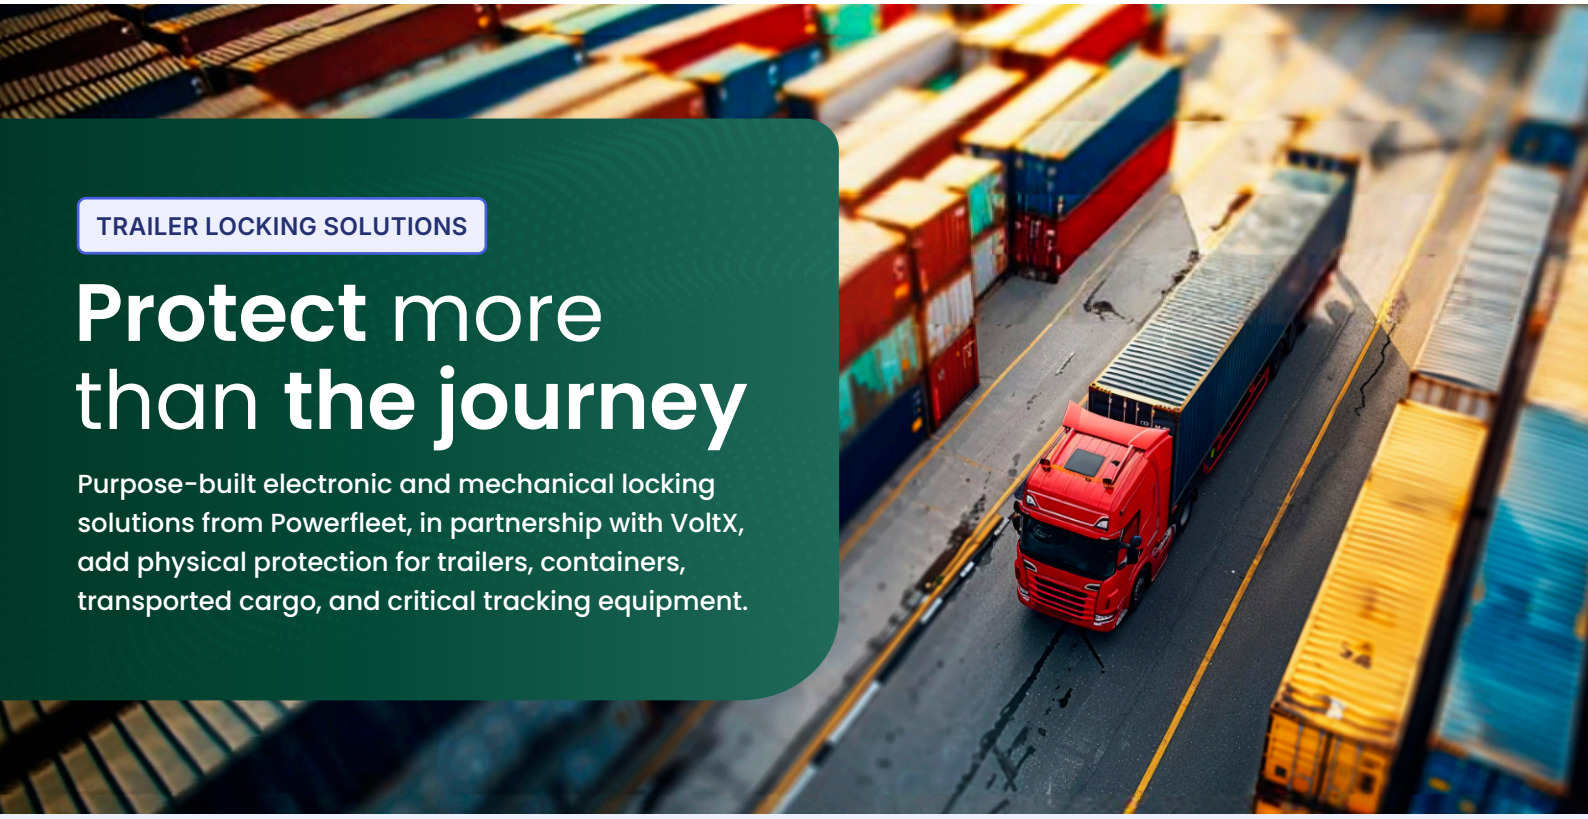
POWERFLEET®

SOLUTION BRIEF



TRAILER LOCKING SOLUTIONS

Protect more than the journey

Purpose-built electronic and mechanical locking solutions from Powerfleet, in partnership with VoltX, add physical protection for trailers, containers, transported cargo, and critical tracking equipment.

Tracking helps you locate an asset. Physical locking helps secure cargo access points and protect tracking equipment attached to trailers and containers. Powerfleet, in partnership with VoltX, provides a portfolio of locks for different assets, security requirements, and operating environments.

PROTECT YOUR ASSETS

Physical **protection** for **connected** transport **operations**

A tracking device shows where an asset is, but it cannot physically secure a container door or prevent the device itself from being removed.

VoltX locking products add physical protection around the asset or its tracking equipment while allowing the tracking device to remain operational.

Protect tracking equipment

Secure GPS devices within purpose-built steel housings to help prevent theft, tampering and unauthorised removal.

Secure cargo access points

Add physical protection to container doors during storage, transit and handover.

Fit the asset and operation

Choose from fixed and adjustable locking solutions designed for different container, truck and trailer configurations.

APPLICATIONS

Where the **portfolio** fits

The Powerfleet and VoltX portfolio supports physical security requirements across a range of fleet, cargo, and asset applications.

High-value cargo
Add physical protection where cargo risk calls for more than location visibility.

Trailer fleets
Protect trailer-mounted tracking equipment on the beam or chassis.

Export and cross-border containers
Secure container access points across storage, transit and handover.

Regional and long-haul transport
Add durable physical protection for demanding transport environments.

First- and last-mile transport
Use fixed or adjustable options to suit different assets, configurations and deployment requirements.

Mixed operations
Match different locks to container, truck and trailer configurations.

One **portfolio**. Different **security applications**.

Every operation has different assets and security requirements. Powerfleet, in partnership with VoltX, provides locks for container doors and trailer chassis, as well as purpose-built steel housings for GPS tracking devices. The right option depends on the asset, application, and level of physical protection required.

ASSET	DEPLOYMENT	PROTECTION	APPLICATION
Trailer, container, or tracking device.	Fixed or adjustable.	Cargo access point or tracking device.	Mixed fleets or temporary and rotating asset deployments.

SECURE YOUR STRATEGY

Why **add physical locking** to your **security strategy**?

Protect critical tracking equipment	Help reduce the vulnerability of GPS equipment to theft, tampering and unauthorised removal by securing the device within a purpose-built housing.
Add physical cargo protection	Combine asset visibility with locks designed to add physical protection to container doors and other cargo access points.
Support different fleet requirements	Choose from fixed, adjustable, and asset-specific options for different fleet requirements.
Use products built for transport	Steel construction and hardened locking components support use in demanding road, freight and logistics environments.
Add context to incident reviews	Use lock and tracking information as additional context when investigating a potential security incident.
