

POWERFLEET®

# 5 signs your safety strategy is still reactive

A quick self-assessment for  
Operations and Safety Leaders.

How many feel familiar? →

01

**SIGN**

**You only see risk  
after the fact**

**QUESTION**

**Can you spot risk before  
an incident happens?**

If not, your team is managing incidents,  
not preventing them.

SIGN

# Your team is stuck in review mode

QUESTION

Are teams spending more time  
reviewing footage than coaching?

More alerts are not the answer.  
Clearer priorities are.

## SIGN

**Road and on-site safety  
live in separate systems**

## QUESTION

**Are vehicles, equipment  
and worksites managed in  
different tools?**

When safety data is split, risk falls into the gaps.

04

SIGN

**Your data explains the  
past, not the next move**

QUESTION

**Does your data show what  
happened, or what needs  
attention next?**

Dashboards explain events.

Safety teams need earlier signals.

05

SIGN

**You measure activity,  
not outcomes**

QUESTION

**Is success measured by  
reports, or by fewer incidents?**

Activity is not progress.

Reduced risk is.

# Move from reactive to AI-powered safety

See how Powerfleet helps teams spot risk earlier across vehicles, equipment and worksites.
