

COMPLETE OVERVIEW

Every asset.
One platform.
Total visibility.

From the warehouse floor to the open road, Powerfleet's AIoT solutions connect every asset, vehicle, and person – delivering real-time visibility, control, and intelligence to operate more safely, smarter, and more efficiently.

Our solutions

Asset IoT

Operational intelligence for high-value assets

Track the usage, location, and condition of critical assets in real time – whether in transit, in the yard, or deployed in the field. Reduce losses, improve uptime, and make data-driven decisions across construction, agriculture, logistics, and beyond.

On-Road IoT

Where safety, efficiency, and compliance meet

Real-time visibility, predictive analytics, and actionable insights help your fleet respond faster, operate more safely, and optimise performance across vehicles, drivers, routes, and geographies.

Asset IoT

Operational intelligence for remote and rugged sites

Real-time visibility into off-road assets across construction, mining, oilfield, and rental sites. Track actual usage to optimise maintenance, reduce service costs, and improve uptime. Detect unauthorised movement instantly to deter theft and protect high-value machines.

AI Video

AI-powered video for complete protection

More than just footage capture. Detect risky behaviour, trigger real-time alerts, and deliver actionable evidence when it matters most. Whether on the road, in the warehouse, or in transit, prevent incidents and protect your people.

On-Site IoT

Reimagining material handling with AI-driven intelligence

Real-time visibility and operational intelligence across material-handling environments – helping you respond quickly, operate safely, and scale effectively across sites, shifts, and assets, despite labour shortages, safety risks, and compliance pressures.

Powerfleet has acquired RTS Solutions Africa, one of South Africa's leading forklift management providers, **expanding our intelligent forklift stack** with the FMX Forklift OBC and FMX Forklift Display to deliver advanced machine management, visibility, and operational control.

Unify every asset, vehicle, and person from a single pane of glass

Our hardware-agnostic AIoT cloud platform connects assets from over-the-road to in-warehouse operations. Unity unifies the data that drives your business, helping you set goals, track progress, and unlock measurable ROI by improving safety, compliance, sustainability, and productivity.

Value-added services & products

Whether your vehicles are on the road, in the warehouse, or in transit, our integrated services complement our core AIoT solutions, enabling smarter decisions, reduced risk, and better cost control.

By combining advanced analytics with practical tools, our offerings include journey management, uptime management, fuel sourcing, and fuel tank safety systems – providing you with end-to-end operational oversight.

Retail solutions

Vehicle tracking and personal safety, designed for protection.

Real-time visibility, stolen-vehicle recovery, and 24/7 emergency assistance.

Discreet, wireless vehicle recovery.

Protecting cars, bikes, trailers, trucks, and caravans with affordable technology and a trusted network of recovery specialists.

Proven results in South Africa

The Bakers Group, one of South Africa's leading logistics operators, partnered with Powerfleet and CtrlFleet to transform high-volume freight operations:

22%

increase in fleet utilisation, reducing asset idle time

65%

faster load turnaround, enabling higher volume throughput

48%

fewer client complaints through proactive exception management

65%

improvement in driver compliance reducing risk-related penalties

"This has been a fantastic addition to our operations. The solutions does more than just talk; it delivers on everything that was promised."

– Tobie Van Rhyn, General Manager: Warehousing & Distribution, Bakers
