

TANKSAFE® 'SHIELD'

AFFORDABLE DIESEL ANTI-SIPHON SOLUTION

FUEL THEFT AND RISING COSTS GETTING YOU DOWN?

TankSafe® 'Shield' restricts the amount of fuel that can be skimmed from inside the anti-siphon chamber. This is largely thanks to its short neck and 4 cm thick, solid aluminium, attack proof, dome base, leaving only a minimal amount of fuel exposed.

BENEFITS

- Compatible with the OEM diesel cap
- The unique patented undercut design conceals and protects the gasket between the anti-siphon head and tank neck preventing attack and water ingress.
- Attack proof 4cm thick patented solid dome base
- Short chamber offers 75% more protection than its nearest competitors.
- Does not impact flow rate (tested at 120+ litres per minute).
- Flow apertures with teeth prevent 6mm+ siphoning tubes from bypassing the device
- Easy DIY fitment
- Highly competitively priced solution
