Engineer **safety** into **every shift**

Digital inspections, **authenticated** operators, and **real-time** visibility for **Food & Beverage** operations.

The **Challenge**

Food & Beverage environments are fast-paced, high-risk, and heavily regulated. Yet many operations still depend on paper-based inspections, manual defect reports, and limited visibility across the warehouse, yard, and fleet.

The result is reactive safety, avoidable downtime, and audit exposure.

The **Powerfleet Approach**

Powerfleet digitises on-site safety and operational visibility across the entire operation, from warehouse to yard to road – a single connected platform.
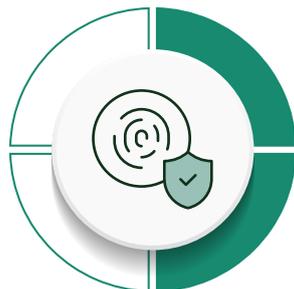

What **We Deliver**

Digital safety checklist
Replace paper with real-time inspection data and instant defect visibility.

Operator authentication
Ensure only authorised operators use assets – eliminate phantom damage.

Real-time defect & maintenance alerts
Unsafe assets are automatically flagged and removed from service.

Pedestrian Proximity Detection
Reduce collision risk with AI-powered cameras, alerts, and behavioural insights.

Proven in **Food & Beverage**

Trusted by global Food & Beverage manufacturers to **cut damage** by up to **85%** and reach **100% compliance** with key safety metrics.

To **learn more** about our **solutions** for the Food & Beverage industry, and to **schedule a conversation** with the team, **scan the QR code**.

Why It Matters

01
Faster response to safety risks.

02
Reduced incidents and downtime.

03
Improved audit readiness.

04
Greater accountability and utilisation.

05
Predictable, data-driven safety outcomes.

POWER⊗FLEET®

On-site **safety**. Operational **visibility**. Predictable **outcomes**.
