

From paper to precision:

Guaranteed, certified, and proficient operator access management for integrated safety and increased uptime

Designed for operations and safety teams managing forklift and industrial equipment fleets.

100% certified, proficient, and authorized operator access with automated data integration and proficiency monitoring. Prevent unauthorized use, automate training compliance, and keep your operators safe and assets running.

Certified Operation

Increased Uptime

LMS & Ops Data Integration

Safety & Compliance

The challenge

Untrained and inexperienced forklifts and equipment operators increase the risk of accidents, injuries, and expensive downtime.

Disconnected business systems and manual operator certification system administration make it almost impossible to ensure only qualified operators are accessing expensive and dangerous equipment.

Lack of certification and proficiency status visibility exposes companies to compliance violations, higher liability, and reduced operational efficiency.

The solution: Enhanced Access Control

Powerfleet's Enhanced Access Control solution integrates operator certification and HR data with access control and proficiency monitoring.

Real-time operator certification, cost center, and proficiency data integration automatically updates and validates operator forklift and equipment access and eliminates manual effort and error.

Integration and reporting eliminate manual errors, reduce risk, and create a safer, more compliant, and efficient working environment.

Key benefits

Certified and compliant operations

Only qualified operators can access approved vehicles and equipment.

Reduced risk and downtime

Automated access control prevents accidents, damage, and costly disruptions.

Automated data sync

Daily updates ensure HR, training, and proficiency data is correct and stays up to date.

Status visibility

Integrated HR and training data improve operator certification and proficiency oversight.

Operational efficiency

Automation streamlines onboarding, offboarding, and policy enforcement.

How it works

Powered by Unity, Enhanced Access Control connects certification, HR, and proficiency data to automate and enhance operator equipment access management.

Warehouse IoT Enhances Access Control

Data synchronization across these systems ensures that only authorized and proficient operators can access equipment, maintaining safety, compliance, and operational uptime.

Real-world results

Global automobile manufacturer guarantees 100% certified operator equipment access

A global automotive manufacturer with plants across the United States integrated Enhanced Access Control into its operations, to manage a wide range of material handling and industrial equipment across multiple sites, departments and cost centers.

Manual operator equipment-type certification and access control administration lagged operator turnover and operational pace, leading to compliance, safety, and uptime challenges.

By integrating Powerfleet's Enhanced Access Control solution with their Human Resources and Learning Management System (LMS) platforms, they achieved:

100% certified operator access control across all equipment types

Reduced operator certification-to-access time from days to hours

Reduced operator access administration time from days to seconds

Eliminated manual effort and errors with certification and proficiency automation

Real-time compliance and proficiency visibility across all plants and equipment

Minimum operator access policy enforcement and management

Take action now

Do not wait for the next accident to disrupt your operations or jeopardize your team's safety. Contact Powerfleet today to schedule your Enhanced Access Control demonstration.
