THE POWERFLEET DIFFERENCE

Built to **unify** complex operations

ONE CONNECTED PORTFOLIO

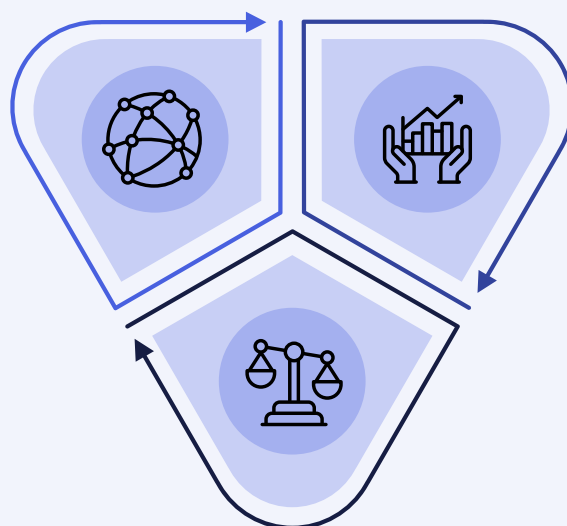

Connect on-site equipment, on-road fleets, AI video, and mobile assets across the operation.

EQUIPMENT AND DATA AGNOSTIC

Support mixed fleets and integrate data from Powerfleet and third-party systems.

BUILT TO SCALE

Apply a consistent operational framework across sites, countries, and regions while supporting local requirements.

TRUSTED BY GLOBAL ENTERPRISE LEADERS

Trusted by global enterprise leaders

Continental

33%
reduction in
vehicle-related
damage costs

UNITY

One source of actionable operational intelligence

Unity, Powerfleet's hardware-agnostic AIoT platform, ingests and harmonizes data from virtually any IoT device or external source and delivers actionable intelligence through Unity applications, Enterprise Dashboards or within existing systems and workflows.

From visibility to action in three steps

1

Connect your data

Connect systems, sensors, equipment, operator access, inspections, and video with minimal IT lift.

2

See what matters

A single operational view surfaces priority safety, compliance, and performance insights across sites.

3

Take action, fast

Dashboards, alerts, automated workflows, and integrations with existing enterprise systems turn insight into action.

A platform for enterprise transformation

Powerfleet gives consulting and transformation partners a scalable foundation to connect fragmented client operations, integrate critical data, and deliver measurable improvements.

Proven in complex enterprise operations

Global organizations including PepsiCo and Caterpillar use our solutions, giving partners a proven foundation for large-scale transformation programs.

Together, we can help organizations integrate critical data, standardize performance, and scale measurable improvements.

Bring connected intelligence to your clients

ON-SITE EQUIPMENT SOLUTIONS

Connected intelligence for safer, more efficient material handling operations

Forklift Gateway (VAC)

An equipment-agnostic solution for operator access control, digital safety checklists, impact detection, and performance monitoring across mixed forklift fleets, improving safety, accountability, compliance, and efficiency.

Pedestrian Proximity Detection

An AI-powered camera system that detects pedestrians and industrial vehicles in the path of travel, providing real-time visual and audible warnings, to promote greater awareness and safer interactions in busy environments.

Watch: [Pedestrian Proximity Detection in action](#)

Digital Video Recording

Captures continuous and event-triggered video around material-handling equipment to accelerate investigations, strengthen coaching and accountability, reduce liability, and support safer operations.

Speed Management

Integrates with compatible forklifts to control or limit speed according to operational and safety requirements.

POWERFLEET ON-SITE+

On-Site⁺

Total estate visibility across On-Site and On-Road operations

Powerfleet On-Site+ connects warehouses, manufacturing facilities, yards, road fleets, drivers, and mobile assets together through Unity, for consistent safety, compliance, and performance.
