Comprehensive journey risk management made simple

JourneyCtrl, Powerfleet's Transport Management Solution (TMS) module powered by CtrlFleet, provides fleets with a structured, electronic and fully integrated approach to planning, approving and monitoring journeys.

Designed to replace manual and paper-based systems, the solution gives decision-makers clear visibility of risks before, during and after every trip. It supports safe, compliant and efficient operations across industries where vehicles travel long distances, navigate high-risk routes, or carry passengers and cargo.

Key features and capabilities

Gain control of your entire fleet operations from the control room to your vehicles, drivers, and customers.

01 **Dynamic scheduling**

Empower your fleet with our intuitive drag-and-drop scheduling system. Assign and rearrange tasks to maximise productivity across your fleet and easily adapt to changes.

02 **Real-time monitoring**

Stay in the know with a real-time monitoring system that leverages live data integrations, offering continuous tracking and status updates for your entire fleet.

03 **Customer portal**

Strengthen customer trust by sharing an up-to-date tracking link showing order status and vehicle locations for all their active, completed and scheduled orders.

04 **Waypoint-based orders**

Meet customer requirements and manage risk by creating unique, customised workflows per order for a seamless and efficient delivery process.

CtrlFleet Beacon

CtrlBeacon is your always-on risk and compliance layer, designed to alert, analyse and act in real time. Create workflow and automation based on your orders and live fleet data. Effortlessly manage tasks, automate risk mitigation and compliance, improve driver performance and provide updates to customers.

Solution Overview

Driving Time & Fatigue Management

- Daily Rolling Driving Time Reports
- Continuous Driving Rest Reminders
- After-hours Alerts

Route Adherence & Compliance

- Off-Route Alerts
